Suggested Accommodations to include on
Individualized Education Plans or Section 504 Plans for children diagnosed with a Childhood Anxiety Disorder and Selective Mutism

~ Least Restrictive Environment
~ Allow nonverbal communication (pointing, head nods, shakes, thumbs up or down, facial expressions etc.)
~ Prior preparation or alternatives for presentations
~ Video/Audio taping
~ Verbal intermediary
~ Small group work
~ Testing accommodations...For example, taping reading fluency lessons at home via video or audiotape is appropriate, assuming a gradual weaning to “verbalization” is taking place. Consider this sequence of steps:
  o Allow the child to tape her lessons at home.
  o Next, encourage her to tape in a classroom with her parent present.
  o Encourage her to tape part of a lesson on tape, then whisper the lesson to the parent (or teacher) within the class setting.
  o Next, have her whisper the entire school lesson in the classroom with only the teacher present.
  o Increase to another student (a preferred friend), plus the teacher.
  o Increase all to verbalization.
Each individual step is often a huge leap because the child feels that “the words just won’t come out” even through she desperately wants to speak to her peers. Even the slightest successes from the child—including looking at the teacher, or coming to the speech room—should be calmly but fully praised the adult.
~ Related services (emotional support, speech and language therapy, occupational therapy etc.)
~ Do not single out the child
~ Have a classroom routine / structured setting
~ Have a “safe” place in the room
~ Do not expect her to talk
~ Don’t comment if the child does talk
~ Seat child in close proximity to a “buddy” or friend
~ Don’t have child be the first to accomplish a demonstration
~ Phrase questions requiring single word responses
~ Do not pressure child for eye contact
~ Give advanced notice of changes in routine, field trips, outside speakers
~ To help with initiating peer interactions use language such as “___ needs someone to help with a puzzle, why don’t we join her”
~ Weekly communication from the teacher
~ Don’t call out the child’s name or draw unnecessary attention to the child. If you are happy with something the child is doing, say something generic like “I love how kids are putting away their toys”
~ Be aware of child’s sensitivity to loud noises or being overwhelmed by lots of chaos
~ Use words to explain how you feel, not just facial expressions and body language
~ Be concrete – child often has difficulty understanding abstract language
~ Quarterly meetings with all related service providers and teacher
~ Minimize direct questioning
~ Arrange appropriate seating
~ Provide the child with word prediction software to encourage her written responses can be heard by all
~ Provide one-to-one time with the teacher (or speech/language pathologist, or psychologist) to play a simple, familiar board game or computer game. The relaxed atmosphere will allow the SM child to “open up.” Then, when the child is comfortable enough to speak in this situation, add one close friend in the room with the SM child and adult. Next, increase the peers to two in the same room with the SM child and adult, etc.

Welcome to this SpeechPathology.com Live Expert e-Seminar!

Unlocking the Silence: Overview and Treatment of Selective Mutism
Presented by: Joleen R. Fernald, M.S., CCC-SLP, Doctoral Student, New Hampshire State University
Moderator: Sandy Uhl, M.A., Director of Professional Development, SpeechPathology.com
Please call technical support if you require assistance 1-800-242-5183

Live Expert eSeminar
ATTENTION! SOUND CHECK!
Unable to hear anyone speaking at this time?
Please contact Speech Pathology for technical support at 800 242 5183
TECHNICAL SUPPORT
Need technical support during event?
Please contact Speech Pathology for technical support at 800 242 5183
Submit a question using the Chat Pod - please include your phone number.

Earning CEUs
EARNING CEUS
• Must be logged in for full time requirement
• Must pass short multiple-choice exam
Post-event email within 24 hours regarding the CEU exam (ceus@speechpathology.com)
• Click on the "Start e-Learning Here!" button on the SP home page and login.
• Must pass exam within 7 days of today
• Two opportunities to pass the exam
Unlocking the Silence: Overview and Treatment of Selective Mutism

Joleen R. Fernald, MS CCC-SLP
Doctoral Student
Speech-Language Pathologist
JFernaldSLP@comcast.net
SMG Mission

To increase public awareness of selective mutism and related childhood anxiety disorders, to promote greater understanding of these disorders through education, support of research and to provide support to professionals, affected individuals and their families.

Shyness vs. Selective Mutism

Shyness:
- Slow warm up period
- Can respond with a nod or small smile
- Same demeanor everywhere - quiet and reserved

Selective Mutism:
- Warm-up time MUCH longer than expected
- Cannot respond at all - may appear frozen
- Dual personality - restrained at school and talkative at home

Difference between being shy and selectively mute...

SM children are at the extreme end of the spectrum for timidity and shyness.

Matter of degree.

Important distinction is that SM interferes with the child's ability to function.

If untreated, it can often have a severe impact on a child's education, self-esteem, and social development.
DSM IV-TR

Consistent failure to speak in specific social situations (in which there is an expectation for speaking, e.g., at school) despite speaking in other situations).

The disturbance interferes with educational or occupational achievement or with social communication.

The duration of the disturbance is at least 1 month (not limited to the first month of school)

Rid the silence.

DSM IV-TR

The failure to speak is not due to a lack of knowledge of, or comfort with, the spoken language required in the social situation.

The disturbance is not better accounted for by a Communication Disorder (e.g., Stuttering) and does not occur exclusively during the course of a Pervasive Development Disorder, Schizophrenia, or other Psychotic Disorder.

Rid the silence.

Diagnosing SM

Easy Criteria…
Child is MUTE in one setting
Child SPEAKS in one setting
School Intervention

- IEP or Section 504? Which is better?
- If IEP, what identification? EH/ED, SLI, OHI etc.
- Accommodations (see handout)

Eligibility

- IDEA
  14 categories in which condition falls
- 504
  No categories
  Mental or physical impairment

Need for Special Education

- IDEA - condition so severe as to require special education
  Special education = specially designed instruction
- Section 504 - typically reasonable accommodations are all that student requires
Special Education Defined

- Specially designed instruction means adapting content, methodology or delivery of instruction
- to address child’s unique needs resulting from disability
- to ensure access to general curriculum in order to meet state standards

34 C.F.R. § 300.39(b)(3)

Possible IDEA Identification Codes

- Speech/language impaired
- Other health impaired
- Emotionally disturbed
  (In N.H. – emotionally handicapped)
Speech/Language Defined

* Communication disorder, such as stuttering, impaired articulation, a language impairment, or a voice impairment
* That adversely affects educational performance

34 C.F.R. § 300.8(a)(11)

Rid the silence.

Other Health Impairment Defined

* Limited strength, vitality or alertness
* Due to chronic or acute health problems
* Which adversely affects educational performance

34 C.F.R. § 300.8(a)(9)

Rid the silence.

Emotional Disturbance Defined

* Condition exhibiting one or more of the following characteristics over a long period of time and to a marked degree that adversely affects educational performance

34 C.F.R. § 300.8(a)(4)

Rid the silence.
Characteristics for EH

- An inability to learn that cannot be explained by intellectual, sensory or health factors
- An inability to build or maintain satisfactory interpersonal relationships with peers and teachers
- Inappropriate types of behaviors or feelings under normal circumstances
- General pervasive mood of unhappiness or depression
- Tendency to develop physical symptoms or fears associated with personal or school problems

What All 3 Conditions Require

- Adverse educational performance
- To such a degree as to require special education

504 “...individual with a disability...”

- A person who has a physical or mental impairment which substantially limits one or more of such person’s major life activities;
- A person who has a record of such an impairment; or
- A person who is regarded as having such an impairment.

29 U.S.C. § 706 (8)(B)
Who Is Entitled to a 504 Plan

- Only children who are currently disabled are entitled to be on a 504 plan
- The other provisions protect against discrimination and have no accommodation feature

3 Elements

- Impairment
- Major life activity
- Substantial limitation

Defining “major life activities”
Including but not limited to:

- Seeing
- Hearing
- Speaking
- Walking
- Breathing
- Caring for oneself
- Performing manual tasks
- Working
- Learning
Team Approach
- Parent
- Classroom Teacher
- School Psychologist/Guidance Counselor
- School Administration
- Psychiatrist
- Speech/Language Pathologist
- Occupational Therapist
- Social Worker

“A habit cannot be tossed out of the window. It must be coaxed down the stairs a step at a time”
Mark Twain

Treatment
- alleviating anxiety
- increasing self-esteem
- communicating in social settings
- Do NOT expect the child to talk!
Types of Treatment

- Behavioral Therapy,
- Cognitive Behavioral Therapy (CBT),
- Play Therapy or
- Psychoanalytic therapy,
- Medication, and
- in some cases, Family therapy.

Behavioral Therapy

- Desensitization,
- Fading, and
- Positive Reinforcement techniques

Cognitive Behavioral Therapy

- Cognitive: change children’s thoughts
- Behavioral: change children’s actions
Play Therapy

- an adaptation of psychoanalytic therapy, which is a psychological treatment based on helping people understand their unconscious thoughts.
- Uses play as communication;
- therapists who are trained in these techniques will observe and participate in play activities with the child and interpret the child's actions as a form of subconscious communication.
Methods of Intervention
- Visual Supports
- Picture Schedules
- Communication Board / Book
- Picture Exchange Communication System (PECS)
  - Teaches initiation within the program
- Social Stories
  - Carol Gray’s Social Stories 10.0
    (template for social stories)
  - www.thegraycenter.org
- Linda Hodgdon
  (www.usevisualstrategies.com)

Medication
- Anxiety problems are related to an imbalance in some of the chemical "messengers" in the brain, or neurotransmitters.
- A neurotransmitter called serotonin seems to be involved.

“Courage Medicine”
- Serotonin Reuptake Inhibitors (SSRIs)
  - Prozac, Paxil, Celexa, Luvox, and Zoloft
- Other drugs that affect several of the neurotransmitters instead of just serotonin
  - Effexor XR, Serzone, Buspar and Remeron.
- None of these medications is "approved" by the FDA for use in treating SM in children.
- Goal is usually to have the child take the medication for 9-12 months.
Cheyenne After Medication

Cheyenne in winter pageant. Observe her physical behaviors.

Rid the silence.

Cheyenne’s First Day with her “Courage Medicine”

Rid the silence.

Stages of Confident Speaking

1. No Communication
2. Cooperation
3. Non-verbal Communication
4. Non-verbal Sound
5. Speech in earshot of new person
6. Single words with new person
7. Sentences with new person
8/10. Speech with more new people
9. Speech in a different place
9/10. Speech in more new places

Rid the silence.
Dr. E’s Stages of Selective Mutism

* **Stage 0 – Non-Communicative**
  No responding / No initiating
  Stiff, expressionless, motionless, frozen

* **When is a child at Stage 0?**
  When she senses she is unsafe
  The younger the child, the > Stage 0
  The child is in new or unfamiliar settings
  The child has feelings of high expectations

---

**Stage 1 – Non-verbal Communication**

**Stage 1A – Responding**
Pointing, nodding, writing, sign
language, use of objects, AAC device

**Stage 1B – Initiating**
Getting someone’s attention
via handing over a note,
pointing, raising one’s hand,
pulling, tugging, AAC device
Dr. E’s Stages of Selective Mutism

**Stage 2 – Transition into VERBAL COMMUNICATION:**

Stage 2A Responding - Via any sounds, (e.g. grunts, animal sounds, letter sounds, moans, etc.): Verbal Intermediary or Whisper Buddy; Augmentative Device with sound, (e.g. simple message switch, multiple voice message device, tape recorder, video, etc.)

Stage 2B Initiating - Getting someone’s attention via any sounds, (e.g. grunts, animal sounds, letter sounds, moans, etc.): Verbal Intermediary or Whisper Buddy; Augmentative Device with sound, (e.g., simple message switch, multiple voice message device, tape recorder, video, etc.)

**Stage 3: VERBAL COMMUNICATION:**

Stage 3A Responding
Approximate speech/direct speech (baby talk, script/rehearsing script, soft whispering, speaking)

Stage 3B Initiating (via getting someone’s attention via making any sound)
Approximate speech/direct speech (baby talk, script/rehearsing script, soft whispering, speaking)

**Stage 4 = VERBAL**
Key Points

- SM is about CONTROL
- Big FIVE Words: Yes, No, Hi, Bye, Thanks
- SPEECH PHOBIC (Child in Stage 0 - 1)
  Child is STUCK in nonverbal stage of communication
  MUTE behavior is learned, ingrained
  Child unable to break out of mutism without help to
  UNLEARN
  Often globally mute
  Mutism may be isolated to limited settings, i.e., school
  (speaks everywhere else!)

Where to Begin?

- Step 1
  Let the child know you understand their difficulty and the
  feelings they experience when they try to speak
- Step 2
  Let the child know he is not alone
- Step 3
  Impress on the child that the most important thing is for
  them to be happy, and that they have a friend in you to turn
  to, if they are feeling upset
- Step 4
  Explain how you are going to help

Video

Overview of Treatment
Next...

- Find out how the child relates to the “difficulty” of getting the words out...
  - “The words won’t come out”
  - “I’m scared” or “I’m afraid”
  - “My body won’t let me talk”

- STOP if child responds with...
  - “I don’t want to talk about it”
  - “I’ll talk when I get bigger/older”
  - “I will never talk”

Next...

- Determine words to use when describing the difficulty...
  - Young children may use: feeling scared or afraid
  - Older children may use: difficult or hard to come out

AVOID using the word “TALK” - That’s not the goal!

Next...

- Help child acknowledge or assess his/her feelings...
  - Child can “RATE” feelings of being: scared, uncomfortable and/or where it is “difficult” to communicate
  - Will need to give child examples of HOW he/she feels in different settings for the child to understand. Often extreme ends, NEED to help with “middle ground”
(1) This chart was drawn by a 7 yr old boy.
In this particular case, MR. SUPER DUPER SCARY is how this child feels in circle time. Mr. ITSY BITSY SCARY is how this child feels when driving to school. He feels like MR. FEELS GOOD when at home and playing with his friends.

(2) This chart was drawn by an 8 yr old little girl.
This child feels like the RAINBOW when playing at recess with her friends, but feels like the TALL, number 5 flower when at gym or sitting at circle time. She

Dr. E’s Stages of Selective Mutism

- Stage 0 - Non-Communicative
  No responding / No initiating
  Stiff, expressionless, motionless, frozen

- When is a child at Stage 0?
  When she senses she is unsafe
  The younger the child, the > Stage 0
  The child is in new or unfamiliar settings
  The child has feelings of high expectations
Treatment for Stage 0

Improve engagement, build social comfort & Progress communicatively by...

utilizing a SMALL Environment involving a few people
finding a space with less stimuli and quiet surroundings

For Nonverbal child who is uncomfortable socially, stimulate social engagement!

- WHEN? Child seems to ignore others, is not communicating or acknowledging others. Shadows parents in public settings without interacting with others.
- ** Child may speak to parents or select few in this setting, but noncommunicative (ignores) others!
- TREATMENT STEP: Stimulate child’s social-engagement system!
  - Handover
  - Takeover
  - HI/BYE GAME, Hi/Bye Copy Game, Waving Game (start with pets, people in buses!)
  - Interview game!
  - EYE SPY GAMES!
Dr. E’s Stages of Selective Mutism

Stage 1 – Non-verbal Communication

Stage 1A – Responding
Pointing, nodding, writing, sign language, use of objects, AAC device

Stage 1B – Initiating
Getting someone’s attention via handing over a note, pointing, raising one’s hand, pulling, tugging, AAC device

Can Non-verbal child RESPOND to others in setting?...
- Show prewritten notes/signs in response to questions (3 x 5 cards)
- Point to something, i.e., picture in book,
- Item on menu, (Pointing game)
- Nod yes/no in response to question (hi/bye game!)
- Write replies
- Board GAMES
- ‘waving games’-hand twist, hand rock
- “Mr/Mrs. Takeover”
- Use of sign language

Can Non-verbal child INITIATE?
Go up to a person and:
- ‘TAP ‘n SNAP’
- Clockwatcher!
- Purposely hand things to or take things from others, (Mr/Mrs. HANDOVER) i.e., money to store cashier, menu to waiter
- Beat the clock to ‘wave!’
- Beat the clock to SHOW
- HI/GOODBYE cards!
Dr. E’s Stages of Selective Mutism

**Stage 2** – Transition into VERBAL COMMUNICATION:

**Stage 2A Responding** - Via any sounds, (e.g. grunts, animal sounds, letter sounds, moans, etc.) Verbal Intermediary or Whisper Buddy; Augmentative Device with sound, (e.g. simple message switch, multiple voice message device, tape recorder, video, etc.)

**Stage 2B Initiating** - Getting someone’s attention via any sounds, (e.g. grunts, animal sounds, letter sounds, moans, etc.) Verbal Intermediary or Whisper Buddy; Augmentative Device with sound, (e.g. simple message switch, multiple voice message device, tape recorder, video, etc.)

**Tools to Transition from Stage 2 - 3**

- Augmentative Communication
- Single message voice output device (talking picture album)
- Multiple message voice output device (Go Talk or other static display device)
- Verbal Intermediary
- Using an object or another person to express message (puppets are a wonderful tool for this)

Using child’s feelings as a GUIDE, use person or object who child can speak to:

- Whisper close up
- Whisper at fist length away
- Whisper at half arm length away
- Whisper at full arm length away
- Whisper across table
- Look in direction of person
Tools to Transition from Stage 2 - 3

Use Sounds
• This is great for kids who are speech phobic or who are already using sounds in play like animal sounds or audible laughing
• Begin making tapping noises, finger snapping noises.
  • 2 snaps/taps=YES & 1 snap/tap=NO
• Mouth Popping SOUND
  • 2 pops=Yes & 1 Pop=No

When child/teen able to make ‘Pop’ sound, let them know they made a ‘P’ sound
Child CROSSES OFF letters of the alphabet...
  A B C D E F G H I J K L
  M N O P Q R S T U V W
  X Y Z
  H sound = DEEP BREATH in/OUT

Ritual Sound Approach
Laura Huggins and Jacob Hanna
Tools to Transition from Stage 2 - 3

Use ‘P’ sound and SHAPE into other sounds, i.e., ‘B’ sound… Then, ‘bbbbbbbbbb’=BYE
‘hhhh’=Hi,
As work thru sounds of letters, ‘sssssssssss’=YES
‘nnnnnnnnn’=No.
Put beginning and ending sounds together.
‘Y+S = YES’ and ‘N+o =No’

Dr. Elisa Shipon-Blum

Dr. E’s Stages of Selective Mutism

STAGE 3: VERBAL COMMUNICATION:

Stage 3A Responding
Approximate speech/direct speech (baby talk, script/rehearsing script, soft whispering, speaking)

Stage 3B Initiating (via getting someone’s attention via making any sound)
Approximate speech/direct speech (baby talk, script/rehearsing script, soft whispering, speaking)

Importance of Early Intervention

- Minimize negative impact on the child
- Prevent situation from becoming worse
- Prevent mutism from becoming engrained
- Prevent repeated ineffective attempts to elicit speech
- Minimize emotional and physical strain caused to parents and teachers
Treatment Suggestions

* What to do

* What not to do

Date: 

**Directions:**
Below is a list of sentences that describe how people feel. Read each phrase and decide if it is “Not True or Hardly Ever True” or “Somewhat True or Sometimes True” or “Very True or Often True” for you. Then for each sentence, fill in one circle that corresponds to the response that seems to describe you for the last 3 months.

<table>

**SCORING:**

A total score of ≥ 25 may indicate the presence of an Anxiety Disorder. Scores higher than 30 are more specific.

- A score of 7 for items 1, 6, 9, 12, 15, 18, 19, 22, 24, 27, 30, 34, 38 may indicate Panic Disorder or Significant Somatic Symptoms.
- A score of 9 for items 5, 7, 14, 21, 23, 28, 33, 35, 37 may indicate Generalized Anxiety Disorder.
- A score of 5 for items 4, 8, 13, 16, 20, 25, 29, 31 may indicate Separation Anxiety Disorder.
- A score of 8 for items 3, 10, 26, 32, 39, 40, 41 may indicate Social Anxiety Disorder.
- A score of 3 for items 2, 11, 17, 36 may indicate Significant School Avoidance.

*For children ages 8 to 11, it is recommended that the clinician explain all questions, or have the child answer the questionnaire sitting with an adult in case they have any questions.*

**Directions:**
Below is a list of statements that describe how people feel. Read each statement carefully and decide if it is “Not True or Hardly Ever True” or “Somewhat True or Sometimes True” or “Very True or Often True” for your child. Then for each statement, fill in one circle that corresponds to the response that seems to describe your child for the last 3 months. Please respond to all statements as well as you can, even if some do not seem to concern your child.

Selective Mutism-Stages of Social Communication Comfort Scale ©

SM-SCCS

Non-Communicative - neither non-verbal nor verbal. NO social engagement.

Stage 0 - No Responding, No Initiating

Child stands motionless (stiff body language), expressionless, averts eye gaze, appears ‘frozen,’ MUTE or Seemingly IGNORES person while interacting or speaking to other(s). MUTE towards others

For communication to occur, Social Engagement must occur

Communicative (Nonverbal and/or Verbal*)

*To advance from one stage of communication to the next, increasing social comfort needs to occur.

Stage 1 - Nonverbal Communication: (NV)

1A Responding - pointing, nodding, writing, sign language, gesturing, use of ‘objects’ (e.g. whistles, bells, Non-voice augmentative device (e.g. communication boards/cards, symbols, photos)

1B Initiating - getting someone’s attention via pointing, gesturing, writing, use of ‘objects’ to get attention (e.g. whistles, bells, Non-voice augmentative device (e.g. communication boards/cards, symbols, photos)

Stage 2 - Transition into Verbal Communication (TV)

2A Responding - Via any sounds, (e.g. grunts, animal sounds, letter sounds, moans, etc.): Verbal Intermediary or Whisper Buddy; Augmentative Device with sound, (e.g. simple message switch, multiple voice message device, tape recorder, video, etc.)

2B Initiating - Getting someone’s attention via any sounds, (e.g. grunts, animal sounds, letter sounds, moans, etc.): Verbal Intermediary or Whisper Buddy; Augmentative Device with sound, (e.g. simple message switch, multiple voice message device, tape recorder, video, etc.)

Stage 3 - Verbal Communication (VC)

3A Responding – Approximate speech/direct speech (e.g. altered or made-up language, baby talk, reading/rehearsing script, soft whispering, speaking)

3B Initiating - Approximate speech/direct speech (e.g. altered or made-up language, baby talk, reading/rehearsing script, soft whispering, speaking)
**Selective Mutism Questionnaire* (SMQ)**

(to be filled out by parents)

Please consider your child’s behavior and activities of the past month and rate how frequently each statement is true for your child.

**AT SCHOOL**
